Information and Instruction

In addition to the procedures published in the KSA AIP ENR 1.2, the following procedures are applicable to VFR flights (Helicopter Operations Only) on Urban VFR Routes (UVRs)

- **Airspace classification**

CTR: Class C	Final sector: Class C	TMA: Class C
--------------	-----------------------	--------------

• VFR Traffic, ATC Clearance Requirements and Altitude Restrictions

- Within the Riyadh CTR, VFR flight must Adhere to VFR routes (UVRs) that follow the designated VFR reporting points (VFRs)
- The Maximum UVR altitude is 500 AGL, and higher altitude is subject for ATC approval.
- VFR routes are recommended routes and may be altered at the pilot's request or as directed by ATC.

- **Pilot Responsibility**

- Pilots are required to obtain ATC clearance to operate within controlled airspace.
- Pilots are responsible to monitor for other traffic, along the VFR route.
- Pilots are responsible for take-off/landing from/to assigned areas.
- Pilots are responsible for seeing and avoiding terrain and obstacles.
- Pilots must maintain a listening watch on the assigned ATC frequency.
- Pilots must consult the KSA AIP, AIP SUP, and NOTAM for the latest aeronautical information.

- **Weather Minima:**

Refer to GACAR Part 91 for VFR weather minima

- **Night VFR:** Night VFR Flights must be authorized by the President.

Note:

- Pilots operating under VFR may request to amend or change their VFR route when necessary for safety, due to weather conditions, or when transitioning to or from a destination or landing point. Pilots should promptly communicate their intentions to Air Traffic Control (ATC). This communication allows ATC to provide appropriate instructions or clearances, ensuring safe separation from other aircraft and effective airspace management. The approval of such requests is subject to ATC discretion based on current traffic and airspace conditions.
- Operator may reach out to propose new VFR routes at
